

Layers & Second Brain — the full record

Session `session_013nFhtpzbdqJMEg81nydCm` · repo `faraazxxx-ui/claude-` · branch `claude/claude-layers-second-brain-q155b0` · PR `#24`

Started 2026-08-07 · export generated 2026-09-04 · user Dr. Mohammed Rahman

The central delta

YOUR MODEL

Personal data, vectored and trained on itself repeatedly, becomes a self-improving mirror of you — the same convergence as trimming a p-value or confidence interval toward the true state of a case. Weights and loss function map onto this directly.

CORRECTED

Weights are frozen at training time, identical for every user — nothing typed updates them. The equivalent system lives one layer up: a wiki of consolidated pages, retrieved into the context window at the moment of need. The loss function relocates to the gap between what the wiki supplied and what a session actually needed — closed by editing pages, not gradient descent.

Made in turn 1, never revisited — it didn't need to be. Everything that follows is the corrected mechanism, built out.

Turn by turn

1 The teaching request

/axiom · the original prompt

Teach me Claude's layers and the point of wiki pages for a second brain — framed through a physician-with-ADHD self-model and the p-value / loss-function analogy above.

- Loaded axiom, read the wiki protocol first
- Surveyed the repo so nothing duplicated existing docs
- Wrote 6 wiki pages (MOC + 5 under 05_SYSTEMS)
- Updated README, committed (aa40809), pushed
- Opened draft PR #24, subscribed to its activity

LITERAL ASK	Teach layers + wiki-page method
TRUE OBJECTIVE	A durable system, not a chat answer that evaporates
INTENT DELTA	Large enough to change form: the teaching is the wiki, not a description of one
BRANCHES CONSIDERED	(a) chat-only essay — evaporates; (b) one monolithic file — defeats atomic retrieval; (c) interlinked wiki pages — selected: medium is the lesson
PRE-MORTEM	Pages never read → MOC + README pointer; duplicates existing docs → linked as phase 2; misconception persists → correction is the centerpiece
WIKI ACTION	6 pages captured, pushed, PR #24 draft. Drive 2_WIKI mirror deferred — connector unstable

commit aa40809 · PR #24

2 Webhook wake — silent failure TOOL ERROR

system · PR subscription fired

GitHub webhook activity from the new PR subscription (not the user): check CI/comments, schedule a 60-minute self check-in.

- Queried the PR list (came back empty on this call)
- Attempted to schedule a check-in under an incorrect tool name — errored

Tool failure — mcp__Claude_Code_Remote__send__later: “No such tool available.” Turn ended with no chat reply. Seed of the repeat failure in turn 4.

3 The redo — a channel fix

/axiom · red-team + artifact requirement

Red-team the output; always deliver as artifact/PDF; succinct handoffs, verbose internal plan; match a visual-spatial, no-jargon archetype.

- Loaded artifact-design + artifact-diagramming
- Built an interactive HTML guide: layer stack, correction diagram, loop diagram, consolidation diagram, triage tree
- Published as a Claude Artifact
- Captured the delivery rules as a new standing page (*Output Contract for AI Handoffs*)
- Updated MOC, committed (894530b), pushed

RED-TEAM VERDICT	Right content, wrong medium — rebuilt as interactive diagram artifact; chat now carries only the handoff
WIKI ACTION	Delivery rules captured permanently — <i>Output Contract for AI Handoffs</i> (status: stable)
INTERNAL DELTAS	Withheld per instruction — on request

wiki/Second Brain Visual Guide.html
Published artifact: claude.ai/code/artifact/4433a8b0-37be-4507-bf1d-950dc11653f5
wiki/05_SYSTEMS/Output Contract for AI Handoffs.md
commit 894530b

4 The check-in that couldn't schedule itself APPROVAL DENIED ×2

relayed · PR status + reschedule attempt

Re-check PR #24; act on anything actionable; re-arm silently if nothing changed.

- Confirmed PR #24 still open, draft, no comments, no CI configured
- Retried scheduling with the corrected tool ID — failed differently this time
- Seven "continue from where you left off" interrupts arrived mid-stall
- Retried once more — same failure; gave up and reported status manually

Tool failure — `mcp__bf7c680d-...__send_later`: “MCP tool call requires approval,” denied twice. A structural environment gap, not an interpretation error.

5 This export SKILL + 5 FORMATS

/skill-creator · the request that produced this document

Several unresolved slash fragments, then: export everything — inputs, outputs, deltas, artifacts, reasoning on both sides — as PDF, artifact, JSON, Markdown, SQL, into a folder, for external audit and reconstruction.

COMMAND VS. PROSE	/skill-creator implies build a skill; the prose implies export now
RESOLUTION	Both — a skill with no worked example is unverified; a one-off export wastes the invocation
NOTE	The /spine, /mega-loop, /angelic-orchestrator-code fragments resolved to nothing real in this environment and were treated as picker noise

skills/session-exporter/SKILL.md — the reusable method

this folder: JSON, Markdown, HTML, PDF, SQL/SQLite

Source of truth: session-data.json in the accompanying folder. This report, the interactive HTML, and the SQL dump are all rendered from it.
